

Quick tutorial on assigning files in a portal/folder

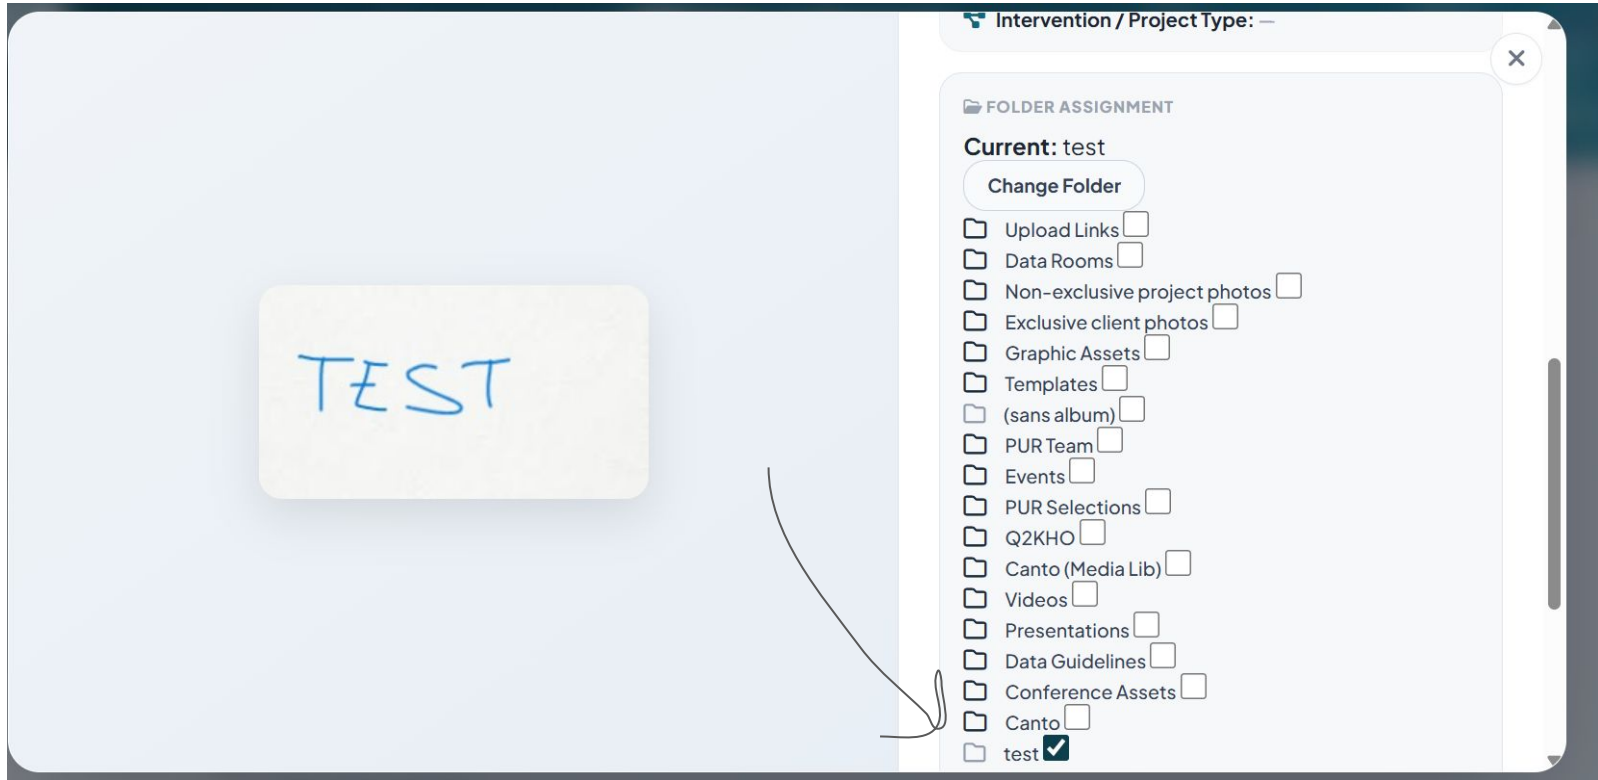

I uploaded a file for the test

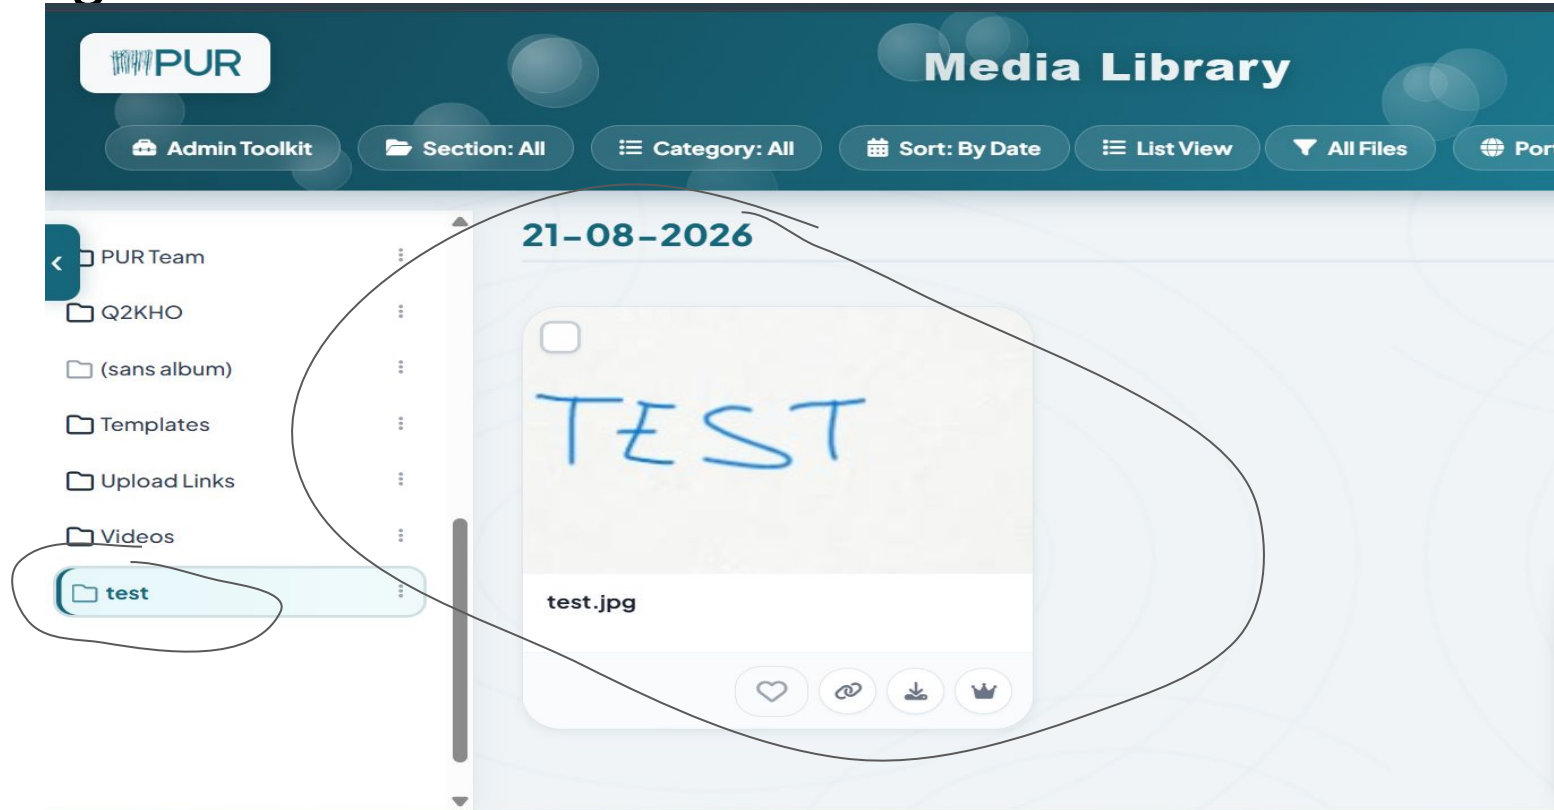

I create a "test" folder to store my file

To store it, I click on the file and go to "assign to a folder" and choose the folder I just created.

So now the file is indeed in the "test" folder when I navigate to the folder

Now let's display this folder containing this file in a portal

I choose the portal where I want to put the folder and to do this, I click on the purple folder icon.

The screenshot shows the 'Portals' interface with a dark teal header. On the left is the 'PUR' logo. On the right are buttons for '← Gallery', '+ New Portal', and a 'DG' profile icon. Below the header is a grid of portal cards. The 'test' card is highlighted with a hand cursor clicking the purple folder icon, and a tooltip 'Link to Folder' appears. The cards display the following information:

Portal Name	Files	Size	Created	Privacy
Syllucid	4	1 folder	05-07-2024	PUBLIC
test	2543	5 folders	20-08-2025	PUBLIC
test2	2862	1 folder	24-04-2026	PRIVATE
test3				
Test -				
Unilever				

I choose the folder I want to assign to the portal, so here the "test" folder.

This is the folder we created at the beginning.

Link test to a Folder

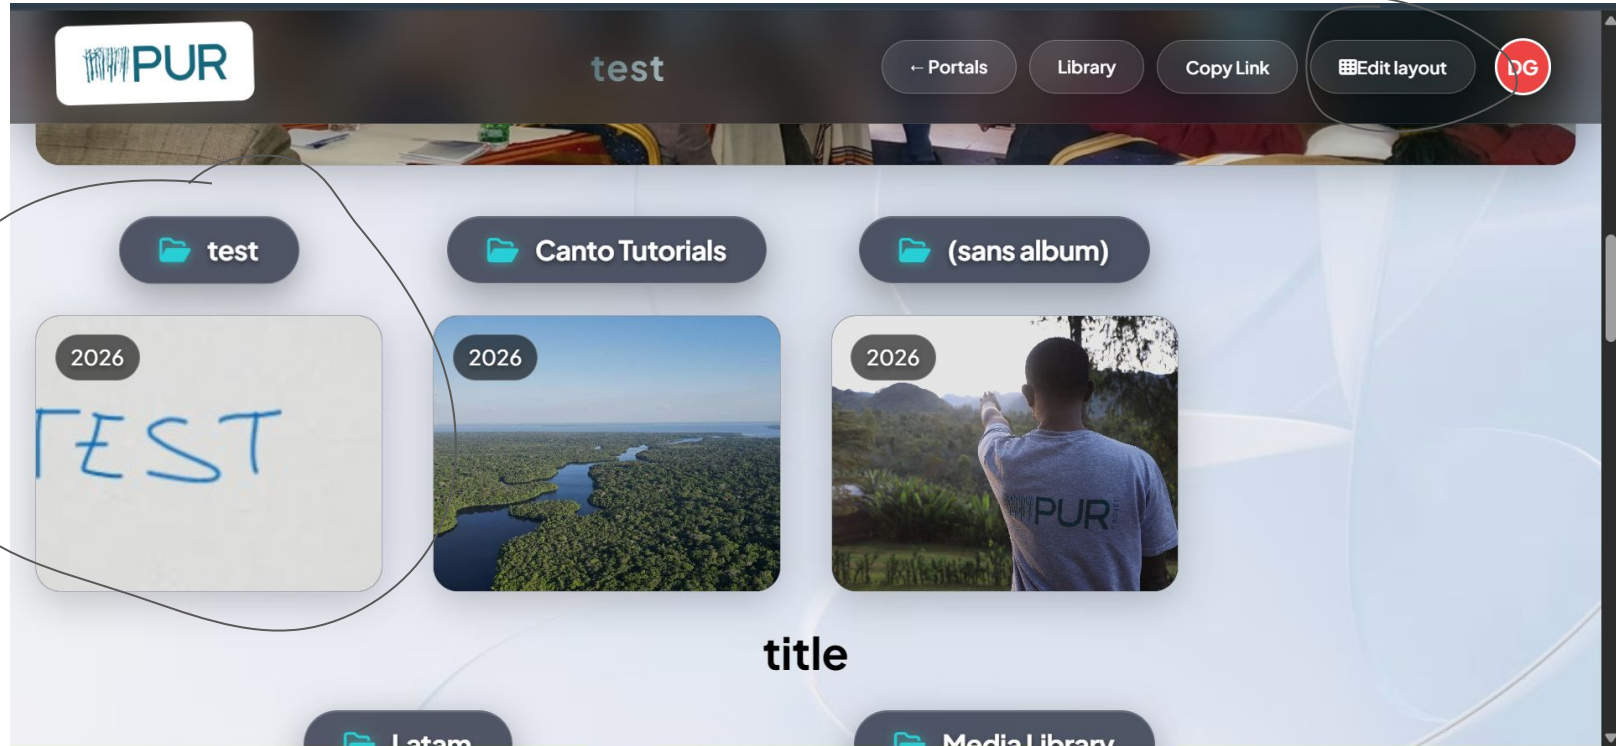

Select Folders to display

- > ☐ Q2KHO 1x1
- > ☐ Canto (Media Lib) 1x1
- > ☐ Videos 1x1
- > ☐ Presentations 1x1
- > ☐ Data Guidelines 1x1
- > ☐ Conference Assets 1x1
- > ☐ Canto 1x1
- > ☒ test 1x1

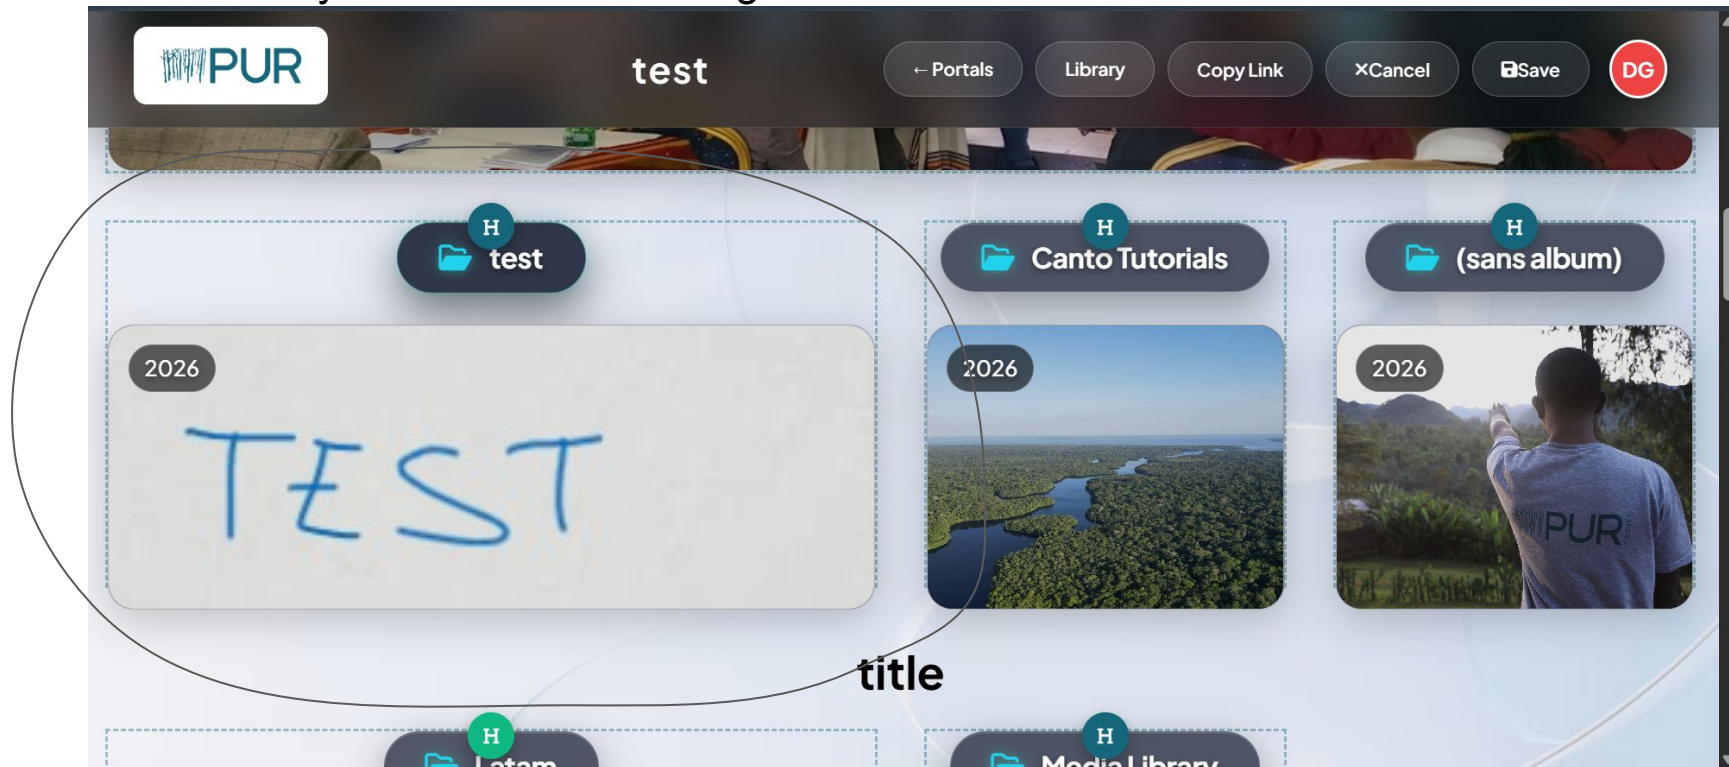

Root Folder (Portal Isolation)

- > ☐ Upload Links
- > ☐ Data Rooms
- > ☐ Non-exclusive project photos
- > ☐ Exclusive client photos
- > ☐ Graphic Assets
- > ☐ Templates
- ☐ (sans album)
- > ☐ PLIP Team

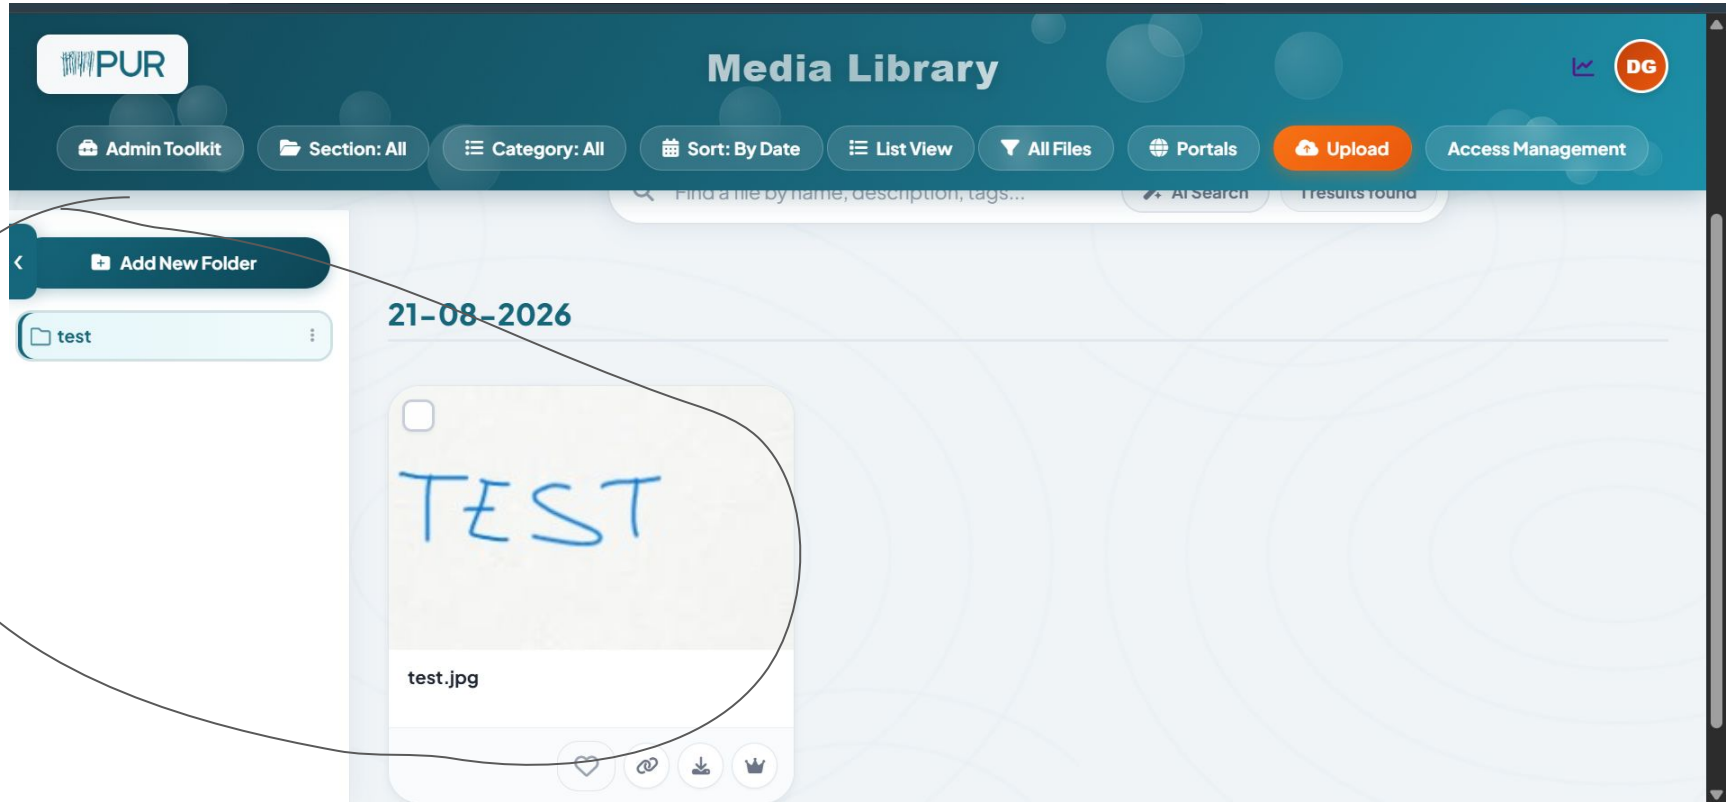

The folder is now correctly displayed in the portal, with the file containing it as its cover page.

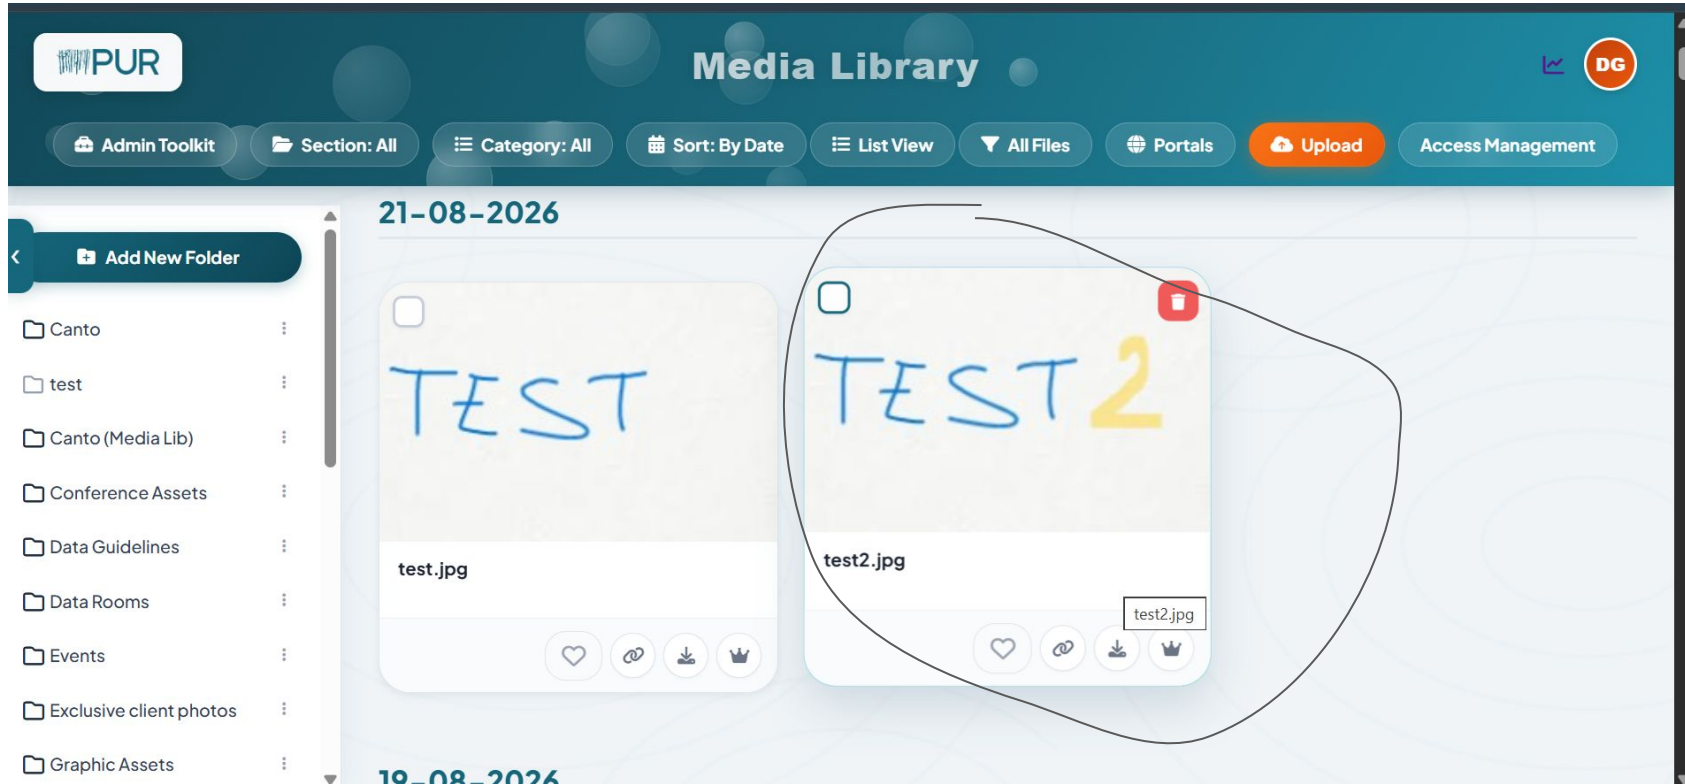

Now that it's displayed, you can tidy things up a bit by pressing the "edit layout" button in the top right of the screen. This will allow you to resize the folder display and add a title above it. Here you can see I've enlarged the "test" folder.

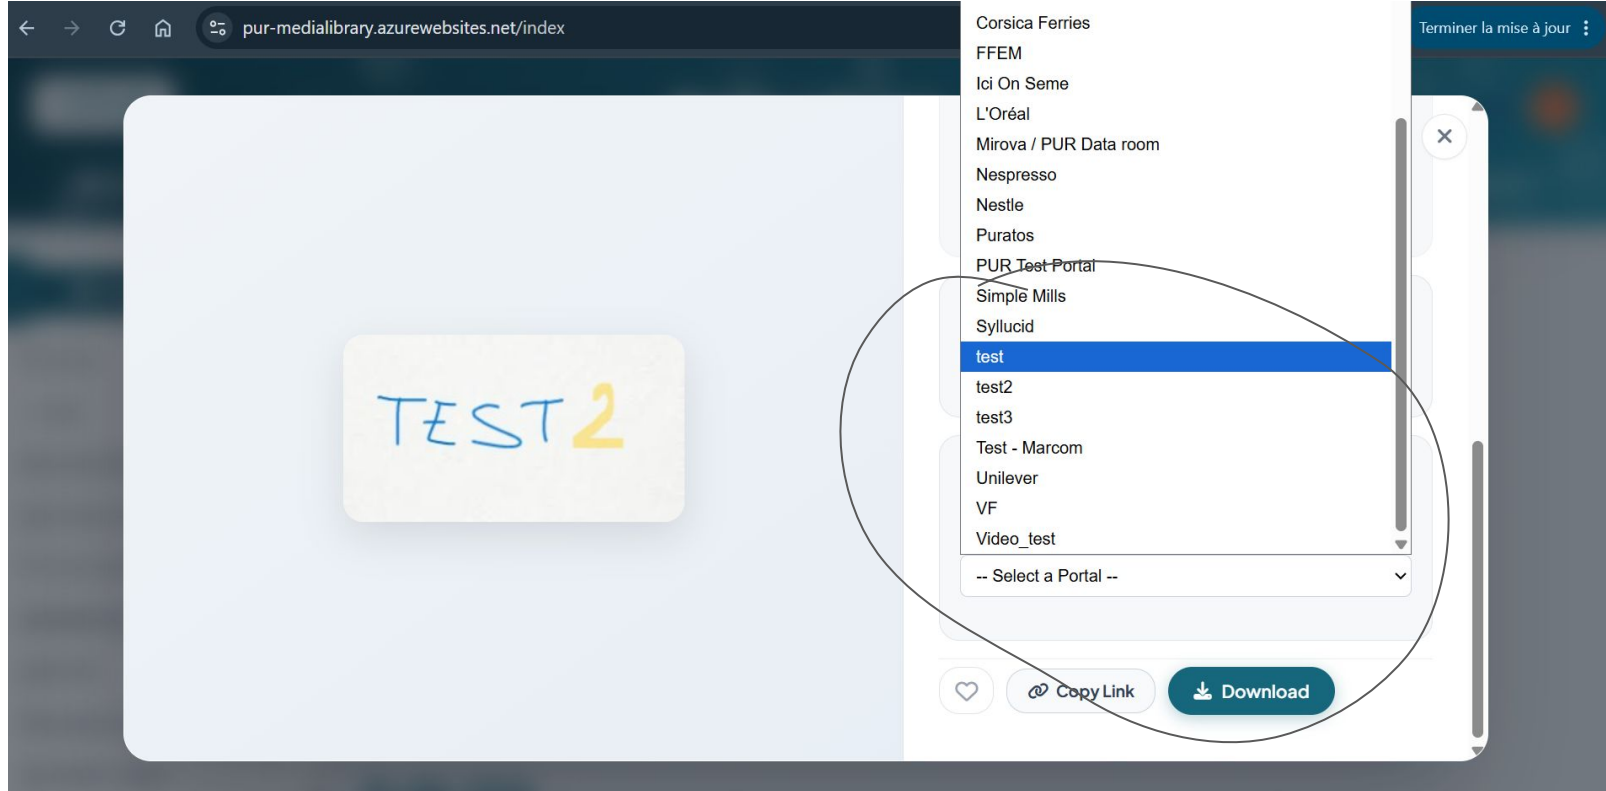

And when you click, you can clearly see the folder isolated from the rest, with only the file you associated with it inside.

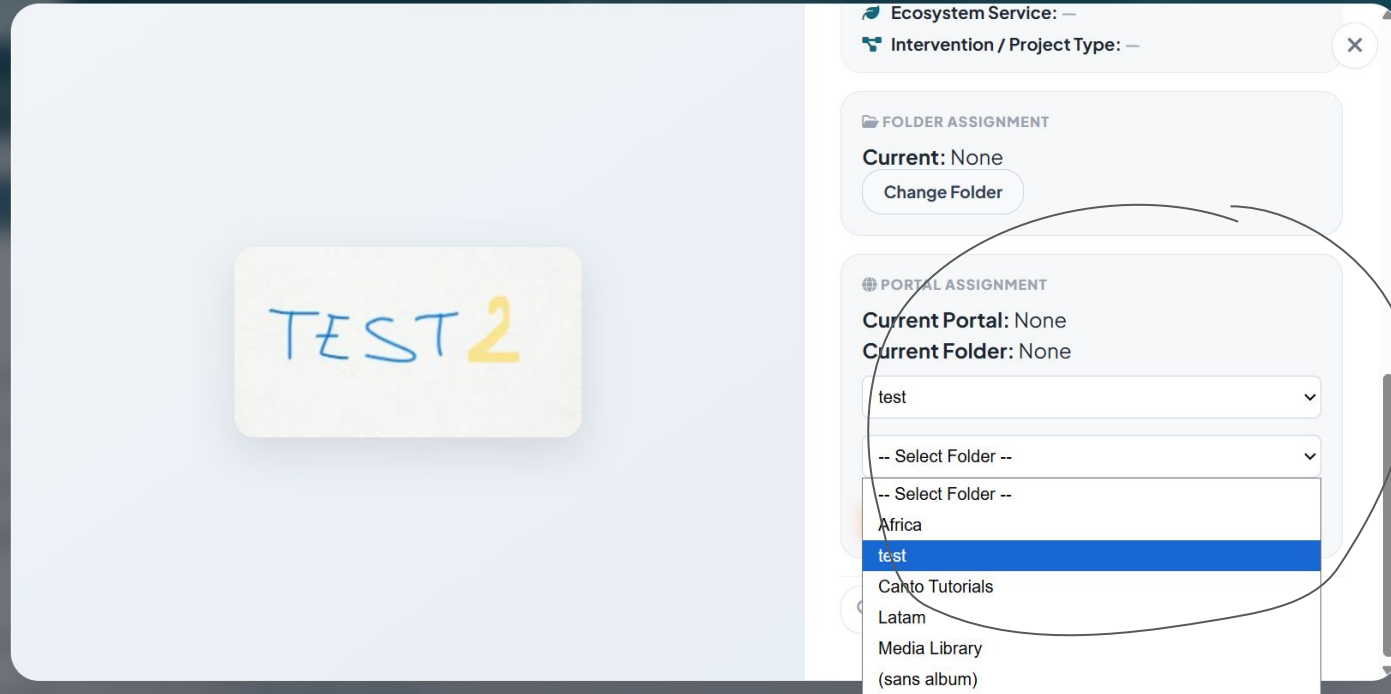

Now let's add a second test file

This time, let's place it directly in the "test" portal, and right below it will offer to add it to one of the folders already present in this portal, so let's add it to the "test" folder (it's the same name, not very clever).

So here we assigned it to the test portal and in the test folder that contained it

Quick note: you can assign the file to the portal without assigning it to a folder, it will simply appear at the bottom of the portal page.

We'll check in the test portal and we can see that both files do indeed appear in the folder
